Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The claimed invention is drawn to a material for making an electroconductive pattern, said material comprising a support and a light-exposure differentiable element, characterized in that said light-exposure differentiable element comprises an outermost layer containing a polyanion and a polymer or copolymer of a substituted or unsubstituted thiophene, and optionally a second layer contiguous with said outermost layer; and wherein said outermost layer and/or said optional second layer contains a light-sensitive component capable upon exposure of changing the removability of the exposed parts of said outermost layer relative to the unexposed parts of said outermost layer.

None of the prior art references disclose the claimed material comprising said light-exposure differentiable element, characterized in that said light exposure differentiable element comprises an outermost layer containing a polyanion and a polymer or copolymer of a substituted or unsubstituted thiophene.

Prior art reference to QUINTENS et al '924 disclose antistatic plastic moldings having a polythiophene and a polyanion in the antistatic layer overcoated with a second layer which is light sensitive. This prior art fails to disclose a layer having said polythiophene and a polyanion in an outermost layer as claimed.

QUINTENS et al '613 disclose antistatic coatings on hydrophobic or paper supports wherein the coating is the outermost layer, however this reference fails to disclose the presence of a light sensitive element, capable upon exposure of changing the solubility of the exposed portions of the outerlayer relative to the unexposed portions, in the layer comprising said

Art Unit: 1752

polythiophene and a polyanion or in the subbing layer. Thus the reference fails to anticipate or render obvious the claimed invention.

MUYS et al '681 and '472 disclose sheet or web material having an antistatic layer overcoated with a barrier layer and antistatic primer layers, respectively. These references fail to disclose the claimed layer having a polythiophene and a polyanion in an outermost layer with a light sensitive element in the outermost layer or in the second layer (being a subbing layer).

EICHORST et al is cited to disclose an electrically conductive layer, a magnetic recording layer on an imaging element with a silver halide emulsion layer. The electrically conductive layer contains the electrically conductive polymers polythiophene and polypyrrole and a polyanion polymer. The reference fails to disclose the claimed light-sensitive component capable of changing the solubility of the exposed portions in either the electrically conductive outermost layer and/or in a subbing layer, thus failing to anticipate or render obvious the claimed invention.

KRAFFT et al discloses an antistatic finish for plastic formed articles. There are two layers applied to the substrate wherein the layer nearer to the support comprises a polythiophene and a polyanion. On the other side of the support, there is coated a silver halide emulsion layer. This disclosure fails to anticipate or render obvious the claimed invention wherein a light sensitive component capable of changing the solubility of the exposed portions is present in either the electrically conductive outermost layer and/or in a subbing layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
